

AI TRAINING & GUIDED AGENT BUILD

We teach while we build.

Guided Build Sessions are build-together, not lecture. We plan the workflow with you, build the agent live inside your project folder, and test it in the Claude or ChatGPT desktop app your team already pays for — so your people can extend and maintain agents on their own.

ENGAGEMENTS DELIVERED

YOU'RE HERE IF

- Licenses are paid for, and adoption is uneven.
- Your team has seen demos, but nothing runs on your own data.
- You do not want a consultant you have to keep paying to change a prompt.

How a session runs

Four steps, one working session. Your team watches every one of them happen.

01

Write the workflow down

We plan the workflow with you and put in writing exactly what the agent should do, and where it stops.

02

Let the agent poke holes

A planning step where the agent interrogates the plan and asks questions, until no ambiguity is left.

03

Build it in your project folder

The agent is assembled on your machine, in your folder, loaded with the reference files it actually needs.

04

Test it live, with you watching

We run it against real work in the session, and you leave understanding every step well enough to repeat it.

Pick the format that fits how your team works

Single guided-build session

One workflow, one working agent. The usual starting point.

Session pack

A discounted block of sessions when you already know there is more than one workflow.

Prepaid-hour retainer

Hours on the books, drawn down as needed. No pressure to consume them on a schedule.

Shared session bank

One balance your departments draw from, so finance funds it once.

Executive briefing

For a broader rollout: we get your stakeholders in one room to agree on the use cases worth funding and the AI governance rules that keep them safe.

HALF DAY
ON SITE OR REMOTE

WHAT YOU KEEP

- A working agent in your own project folder — not a prototype on our laptop.
- The written workflow spec it was built from, in plain language.
- Reference files organized so the next agent can reuse them.
- A team that has watched the method end to end and can run it again.

WHERE IT RUNS

LAYER 01

Claude or ChatGPT desktop app

LAYER 02

Your project folder and reference files

LAYER 03

The workflow your team runs every week

No new platform to buy. The licenses are already on your invoice.

Start with a free AI assessment

One conversation to find the workflow worth building first. We will tell you if there isn't one yet.
